

Immune Support

What is SMART SILVER?

Patented and proven effective at killing :

- Viruses
- Yeast
- Bacteria
- Mold

SMART SILVER

Silver, in all its forms, has been used through the ages as an antimicrobial agent and used for numerous medicinal purposes. Some of the more notable uses have been to reduce the incidence of eye discharge by applying silver nitrate to newborns' eyes and silver sulphadiazine is used to treat burn wound infections.

The problem with most commercially available silver was its ineffectiveness against harmful and resistant bacteria and that it can degrade quickly after manufacturing or bind to any negatively charged molecule in the body, limiting the beneficial effect.

Smart Silver was developed using a patented method of manufacturing that created a more stable and bio-available form of silver that kills every strain of harmful and resistant bacteria tested.

Not Another Colloidal.

Smart Silver is an engineered nanoparticle, not a colloidal silver. It is manufactured using 10,000 volts of current, energizing the entire waterbase, enabling Smart Silver to work as a catalyst to kill bacteria as it draws energy from its environment and emits energy at wavelengths that are measured at 890 to 910 terahertz. This is the same frequency at which germicidal ultraviolet light resonates and is deadly to bacteria.

Therefore, Smart Silver, due to the patented revolutionary process of its manufacture, does not deal with bacteria on merely a chemical level, as do colloidal silvers, but also works on a measurable energetic level. Work completed thus far indicates that Smart Silver is distinguishable from every other silver product tested. The work was headed by the leading materials science laboratory in the world at Pennsylvania State University and was personally led by Professor Rustum Roy, who is regarded as one of the top materials scientists in the world. Also under the direction of Professor Roy, testing was performed by distinguished scientists at Arizona State University (and other locations). They determined that Smart Silver is much more effective as an antimicrobial at very low concentrations of silver when compared to other products, some of which contain many times greater silver concentrations.

Ensuring Optimal Results.

Many independent studies have been completed on Smart Silver and thousands of in-vitro antibacterial tests have been successfully completed against many of the deadliest bacteria on the planet. Several of those studies are now in peer review for international publication. Major safety studies have been conducted, including in-vivo ingestion and in-vivo injected, all of which have found the product to be completely non-toxic at suggested use levels.

"Smart Silver is 96.8% bioavailable and can safely be used every day to support a healthy immune system." -
Dr. Ken Friedman, Ph.D., Medical Research Author

Success Where It's Needed Most

Medical Doctors Provide Humanitarian Aid with Smart Silver. In a humanitarian effort, producers of Smart Silver, working in conjunction with medical doctors, tested the effects of Smart Silver in one of the world's most bacteria-ridden environments—Ghana, West Africa.

Because of the success of this humanitarian effort, doctors continue to use and recommend Smart Silver as a natural alternative. Doctors believe that Smart Silver is the beginning of a new life and new hope for people in this area. The producers were invited to testify before the Congressional House International Relations Committee, Subcommittee on Africa, Global Human Rights and International Operations regarding the effect on malaria.

A Smart Outlook

By teaming with scientists, doctors, certified independent laboratories, major universities and international health consortiums throughout the world, Smart Silver was created with an in-depth understanding of bacteria and pathogenic organisms. It is patented and proven as the most effective silver supplement available.

With the limitations of antibiotics, new scourges emerging and older diseases—such as tuberculosis—evolving into more resistant forms, Smart Silver may well provide the ultimate answer in the struggle against microbes.

Indications: Abscesses, Aches and Pains: flu related, Acne, Anthrax, Asthma, Bacteria, Bladder Inflammation, Boils, Bronchial Constriction, Bronchial Cough and Bronchitis, Burns Carbuncles, Catarrh, Congestion, Cough, Cystitis, Dermatitis, Ear, Flu, Gastrointestinal Distress, Gingivitis, Immune Dysfunction, Infections, Kidney Dysfunction, Laryngitis, Liver Dysfunction, Mucous Congestion, Nasal/Sinus Congestion, Pain: General, Periodontal Disease, Pneumonia, Rhinitis, Sinusitis, Stomach Discomfort, Strep Throat, Swollen Glands, Thyroid Dysfunction, Tonsillitis, Wounds.

Use the 10 ppm liquid as a rinse or spray after brushing teeth to kill bacteria. Swish, hold, swallow.

No Risk of Argyria, 'Blue Man Syndrome.'

Many are concerned with the risk of turning blue from taking a silver product. There is NO WORRY WITH SMART SILVER. In the Journal of the American Medical Association, December 2000, it was estimated that there were 106,000 deaths yearly caused by the 'proper' use of antibiotics. There were no reported deaths or injuries in the year 2000 from the medicinal use of silver products. Silver is the safest and most effective alternative available. Contrary to myth, there is no risk of argyria with reasonable use of Smart Silver. The minimum amount of silver known to cause argyria in adults is 900 mg of silver taken orally in one year. In order to reach this level of silver intake, an individual would have to consume 380 eight-ounce bottles of Smart Silver within one year.
